Plasmid DNA from the normalized library NoT CGAP Kid3 was prepared; and ss circles were made in vitro. Rollowing HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pol of 5,000 clones made from the same library (clonelDs 13223%-1323911, 1456007-1456775, and 150052-1502855). Subtraction by Bento Soares and M.

a modified polylinker; Site 1: Not I; Site 2: Eco RI; basmid DNA from the normalized library NoT CGAP Kid3 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1322376-1323911, 1456007-1456775, and Fatima Bonaldo. "Subtraction by Bento Soares and M. Fatima Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /tissue_type="Peripheral Nervous system"

NCI_CGAP DT0 is a cDNA library containing the following tissue (s): Metastatic Chondrosarcoma in Lung; The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oilgo-dry primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I; and cloned directionally into pT713-pac vector: The oilgonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I is the and the

NCI_CGAP DTO is a cDNA library containing the following visue(s): Metatastic Chondrosarcoma in Lung. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligomaclectide used to prime the synthesis of first strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)B tail. The sequence tag for this library is
                                                                                                                             Email: cgapbs-r@mail.nib.gov
Tissue Procurement: Dr. Jose Mercuende

hd52b09 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dI)18 tail. The sequence tag for this library is
           CDNA Library preparation: Dr. M. Bento Soares, University of Iowa CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa DNA Sequencing by: Dr. M. Bento Soares, University of Iowa Clone Distribution: Clone distribution information can be found through the I.M.A.G.E. Consortium/LLML at: http://image.llnl.gov The following repetitive elements were found in this cDNA Sequence: 1-21, >AT rich#Low_complexity (matched compliment) POLYA=Yes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

was prepared from human testis of a 27 years old man. cDNA

was prepared from human testis of a 27 years old man. cDNA

was prepared using a 15mer oligo dT anchored by two

degenerated bases at its 3'end and containing a Notl site

at its 5'end. The CDNA was cloned between Sall and Notl

sites of pSPORTI. The Mlul-Sall fragement come from the

adaptator used for the cloning. The 3' end is at the Notl

site. cDNA corresponding to abundant species were

eliminated from this library."

A backbone of the vector is basically from pBluescript II (KS), that was in vivo excised from a 1-FLC phage vector (Carninci et al. 2001). 5, end of the CDNA that was digested with XhoI was ligated to Sall site of the vector and the 3' end including polyA tail was ligated to BamHi site of the vector and the 3' end including polyA tail was vector(5'- gAgAgAgArCCAACCCTggAgAgTTTTTTTTTTTTTTTVN-3' was used as a lst 3' primer, and
5'-ggTTCTCgAGATCGACACAGAGACAGCGATGACGCONNNN-3' as 2nd 5'-ggTTCTCgAGTCTTCGAGAACGCGATGCGCACACGAACAGCGATGCGCGAGATGCGCGAGTCGAATTCGTCGAGAACGCGATGCGAATCGGCGGATCGAATTCGTCGAGAACGCGATGCGAATCGGCGGTCTGAATTCGTCGAGAACGCGAATGGCGAGTCGAATTCGTCGAGAACGCGAATGGCGAGTCGAATTCGTCGAGAACGCGAATGGCGAGTCGAATTCGTCGAGAACGCGAATGGCGAGTCGAATTCGTCGAGAACGCGAATGGCGAGTCGAATTCGTCGAGAACGGCAGAACGGCAGTCGAATTCGTCGAGAACGGCAATGGCGAGTCGAATTCGTCGAGAACGGAATGGCGAATGGCGAGATGGAATTCGTCGAGAACGGCAGAACGGAATCGGCGAGATGGAATTCGTCGAGAACGGAATGGCGAGATGGAATTCGTCGAGAACGGAATGGCAGAATTCGTCGAGAACGGAGATGGAATTCGTCGAGAACGGAATGGCAGAATTCGTCGAGAACGGAATGGCGAGATGGAATTCGTCGAGAACGGAATGGCAGAATTCGTCGAGAACGGAATGGAATGGCAGAATTCGTCGAGAACGGAATGGAATGGAATGGAATTCGTCGAGAAGAGGAATGGAATGGAATGGAATGGAATTCGTCGAGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATTCGTCGAGAATGGAATGGAATGGAATGGAATGGAATGGAATTCGAGAAAGGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATTCGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGAATGGA

Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CAGGCCATTATGGCC_3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCCGAGGCGGCATG-dT(30)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.65 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA). Note: this is a NIH_MGC
